AI Meets the 2024 Election: Automated Deception

For years, disinformation has focused on misleading text. In the 2024 election season, a spate of AI-generated audio and visual content will likely pollute the wires as well

Defense contractor and AI communications firm DeepMedia [estimates](#) that 500,000 video and voice deepfakes will be shared on social media this year.

In 2016, 32 of 33 major American news outlets cited Russian troll accounts at least once in their coverage.

Responses: Technical

Prevention

- Content authenticity architectures
- Open standards, C2PA
- Partnerships between media and technical orgs

Protection

- Deepfake detectors (built into platforms)
- DARPA and NSF programs on ID'ing GANs

Responses: Policy

Principles:

- Prioritize authentic content online
- Clearly label modified or AI-generated content
- Guard against threats to elections

Legal Frameworks:

- *EU AI Act*: AI tools to sway voters are “high risk” requiring oversight
- *US*: State-level legislation on deepfakes against political candidates, harassment
- *China*: Registration and licensing requirements for AI that could sway public opinion; AI must adhere to “core socialist values”

What can we do -- now?

Adopt content provenance and authenticity technologies, such as in accordance with the C2PA standard for political communications.

Legislation such as the [REAL Political Advertisements Act](#) that requires disclosures of AI-generated text, images, video and audio in political content would provide a much-needed guardrail.

In the meantime, campaigns could commit to a voluntary pledge to label all AI-generated content.
